DETAILED ACTION***Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-64 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-8, 14-18, 21-29 and 30-35 of U.S. Patent No. 6428297 B1. Although the conflicting claims are not identical, they are not patentably distinct from each other because the limitations of the claimed invention and the claim limitations of the patented invention are the same. The difference is the language for determining the gap but both claim the same 1.0 to 20.0 Milliseconds (ms) or 0.001 to 0.020 second contact time or 4.57mm or less gap. The claims are broadened by not structurally claiming annular ridge extending from the cylindrical body, however, both claims have an extruder, extrusion die, chock ring and the gap differences. The gap differences are the same in the claims of both the application and the patented invention.
